PROJECTS SUMMARY

Project 1: Autoportal

Project Description: In this project, we are working on Lead Management System. In this project, we have created so many reporting panels and lead management flow to handle leads coming to system from frontend website. This system is used by our call centre team to manage leads. We are using Yii framework, MySQL, MongoDB and Memcache.

Project 2: Fliplearn

Project Description: In this project, we are creating apis for Web and Mobile Apps to handle website for Education Site. We are using Slim framework, Doctrine ORM, Solr and MongoDB.

Project 3: OLO Gateway

Project Description: This project is to handle all the stores and route the orders to the correct store from frontend for Dominos Pizza ordering website. In this project, we are using customized framework for php, MongoDB and ElasticSearch. Also worked on a python application to manage stores availability.

Project 4: OLO Management

Project Description: This project is to manage reporting for online pizza ordering. We used Yii Framework, MySQL, Mongo DB, ElasticSearch for this project.

Project 5: OLO (OnLine Pizza Ordering)

Project Description: OLO is the frontend website for ordering pizza. In this project we used Yii Framework, MYSQL, MongoDB, MemCache etc technologies for developing the project.
